## Mon-Corr

Mon-Corr is a film forming type corrosion inhibitor specifically designed to protect oilfield tubulars exposed to heavy brines. Mon-Corr helps prevent general and localized corrosion attack on all surfaces in contact with brine-based drilling fluids and/or clear completion brines.

Mon-Corr inhibits corrosion of tubing and casing strings when used in drilling, work-over or packer fluids containing or saturated with sodium chloride, calcium chloride, potassium chloride, sodium bromide, calcium bromide and zinc bromide. Mon-Corr is designed for application in brine-based drilling fluids but can be used in viscosified completion fluids as well.

Application: Corrosion control in brine-based drilling fluids

<b>Technical Data</b>	<b>Typical Properties</b>
Appearance	Liquid
Color	Light brown
Specific Gravity	1.03 ± 0.03
Solubility in water	Soluble
Dosage recommendation	As required

**Packaging: 200L Drums**
