Mon-Scale

Mon-Scale is an aqueous solution of an aminophosphonic acid salt.

It prevents the formation and deposition of scale through the combined effects of crystal modification and excellent dispersing properties.

Application

Mon-Scale is designed to inhibit the formation and deposition of carbonate and sulphate scales in oil field water systems. It is highly effective against calcium carbonate and sulphate scales at sub-stoichiometric levels. At higher concentrations it is an excellent sequestrant of metal ions.

Mon-Scale may be used as supplied or diluted prior to application.

Technical Data	Typical Properties
Appearance	Clear Liquid
Specific Gravity	1.00 +/- 0.05
Flash point	>30 C
Pour Point	<-18 C
pH	7.0 +/- 0.2

Packaging: 1000 L Totes
