Mon-Sol

Mon-Sol is an environmentally friendly solvent-based cleaning agent which exhibits superior de-greasing properties. It was formulated for pump changes and operations in SAGD and thermal wells. Mon-Sol is designed to activate when mixed with hot water and then pumped down hole.

When properly mixed and pumped down hole Mon-Sol will strip heavy oil and bitumen from the pipe down to bare metal, which will result in less pipe, pump, corod, and handling equipment cleaning and cleaning costs. More importantly, there will be less environmental impact on your site.

Mon-Sol leaves behind a tight emulsion down hole. This emulsion will aid in bringing the well back online, as the pump will start its stroke on the emulsified oil rather than trying to fire on a thick heavy oil.

Technical Data	Typical Properties
Appearance	Liquid
Color	Amber
Specific Gravity	0.83 ± 0.05
Solubility in water	Dispersible
Dosage recommendation	250L per 10m ³

Packaging: 1000L Totes, 200L Drums, 19L pails
